VIDEOKit

In addition to multiple occupancy systems Farfisa produces a wide range of stylish video kits that provide an easy to install, convenient solution for smaller installations.

Farfisa video kits employ advanced technology to deliver the features that the market demands using either analogue reduced wiring or the powerful 2 wire digital technology of **Duo System**.

Each video kit contains all the products required to complete a 1 or 2 way installation and is supplied in a compact eye catching display carton. As always, Farfisa offers high quality technologically advanced products that are all designed and manufactured in Italy.

DUO SYSTEM

Duo System is the innovative 2-wire digital system for video colour or b/w installations, intercommunication facility is also guaranteed. The video and audio signals, the door lock service and the function

commands are transmitted over 2 non-polarised wires, simplifying the connection and future maintenance of the installation.

REDUCED WIRING

The solution with reduced wiring is the winner whenever the traditional analogue technology is preferred to the digital one. A reduced wiring installation is a videointercom system with electronic note call and a

reduced number of wires, 4+1. The advantage is of course a simplified installation, with traditional basic features of the systems and an excellent quality/price ratio.
