Stand Alone Proximity Reader - FP52

Stand Alone proximity reader, RFID unit, that can be inserted in MODY door station composition. Ideal for access control applications, it uses all the fittings of MODY push button panels for surface or flush mounting, it is possible to combine in Video Intercom installations. It is provided with 2 monostable relays which timing is settable according to the features of the connected device. The programming is made through master card managed by display and 4 LED's on the front of the reader that indicate also the operation status and data insertion of the enabled cards. Thanks to the 500-card memory capacity, it is particularly indicated for the access management in one-family houses, large buildings or communities. It is provided with 4 cards + 1 Master Card. Also EXIT button facility for first relay is available as standard. The system is completed with passive transponders for the activation. THE PICTURE ABOVE SHOWS INSTALLATION WITH MODULE MD91

CARATTERISTICHE PRINCIPALI
