

ML2262C

Videointercom myLogic home automation - ML2262C

Videointercom with home automation functions. 4.3" LCD-TFT touch screen, 16:9 format, hand free. Through the graphic interface the classical videointercom functions (and furthermore missed chimes, block notes, memo, photo frame) and home automation features (external devices control through specific interfaces) are possible. Software updating and imported personal pictures are possible through memory card. Because the display is a touch screen one in case of multi way installation a particular care should be to the signal distribution and absorption. So the system must properly be conceived and proportioned, it's recommended to contact technical support for planning. Until stocks last.
